

Personal Cyberinfrastructures

Week Two – PUB 101

Gardner Campbell

- Print is not advanced calligraphy
- The web is not a more sophisticated telegraph
- *The medium is the message*
- New modes of communication change what can be imagined and expressed
- [Students] would become, in myriad small but important ways, system administrators for their own digital lives.

Audrey Watters

“...almost all arguments about student privacy, whether those calling for more restrictions or fewer, fail to give students themselves a voice, let alone some assistance in deciding what to share online. Students have little agency when it comes to education technology — much like they have little agency in education itself.”

Audrey Watters

- students need a proprietary online space in order to be intellectually productive.
- it is important to have one's own space in order to develop one's ideas and one's craft.
- *[students] are the subjects of their learning, not the objects of education technology software*
- students have already developed rich social lives online and could use help, not punishment or paternalism, in understanding how to think through the data trails they're leaving behind.

Erin Glass

We know what you ate for dinner, but what did you struggle to reflect on, what were you trying to express?

Erin Glass

Let us build a stable space for student writing to accrue dignity and circulate over time across disciplines, institutions, communities, and nations.

Maria Popova

- Founded in 2006 for a few friends
- Curated content – an emporium of narrative, images, letters
- [Brain Pickings](#) > 3
- [Twitter](#) 798 k
- [Newsletter](#) (150,000 subscribers)

Group Activity

Break into groups of five (strangers!). Head off to a quiet space. Discuss these questions:

- What is a personal cyberinfrastructure?
- Why should you care about it?
- How do you use it?
- How does it use you?
- What can we imagine differently?
